

ECOSPEED Business

Efficient energy and CO₂ management for companies

The business community plays a pivotal role in climate protection. An increasing number of businesses have realised this and also operating with energy and resource efficiency in mind, for their own benefit, ahead of statutory framework conditions coming into force.

In order to achieve and assess energy savings and, as a result, successes in climate policy, regular balancing of energy consumption and of emissions is essential.

ECOSPEED has developed ECOSPEED Business based upon its tried and tested software architecture as optimum support for these requirements. Thanks to its flexibility and a wealth of new possibilities, ECOSPEED Business offers small and large businesses alike an efficient system for energy and greenhouse gas management.

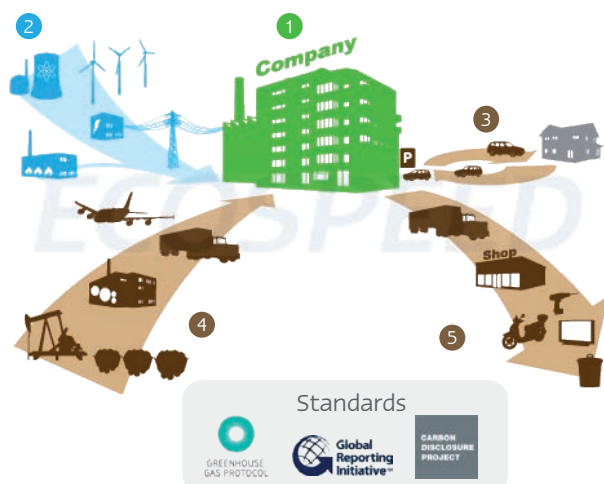

ECOSPEED Business enables companies

- To perform energy and greenhouse gas balancing in accordance with internationally established methods
- To create balances cost-efficiently (efficient data procurement across many locations, including abroad)
- To prepare and continue environmental balance sheets transparently
- To compare KPIs with those of other companies
- To minimise the use of resources for balancing and, thus, to create more scope for the implementation of measures

Further benefits of ECOSPEED Business

- Free choice of balancing units
- Online service which is instantly usable and always up-to-date
- Guaranteed data protection
- Supports any number of users, locations and languages
- Sector-specific add-ons
- Cluster analyses
- Efficient customisation
- Automatic provision of environmental factors for a wide range of countries

ECOSPEED Business balancing areas

Scope 1
1 Direct emissions

Scope 2
2 Indirect energy emissions

Scope 3
3 Employee emissions
4 Supplier emissions
5 Customer emissions
